(54) PLASTER FOR TREATMENT OF DERMATOSIS

(57)Abstract:

PURPOSE: To provide a plaster for the treatment of dermatosis, having uniformly coated ointment and free from the adhesion of the ointment to a protection liner in the peeling of the liner to ensure easy application to the skin.

CONSTITUTION: An ointment is uniformly applied to a substrate such as woven fabric or nonwoven fabric. The coated layer is successively laminated with a sheet layer (separation layer) having softness or extensibility higher than those of the substrate and with a protection liner such as a plastic film to obtain the objective plaster. The outside of the substrate may be covered with cloth, paper, etc., to prevent the extrusion of the ointment from a side of the substrate. The plaster is stored until use in the form sealed in an air-tight container made of aluminum adhesive film, etc.
